Professional Summary

Software Developer with 4+ years of experience building web applications using React.js, Node.js, Express.js, and MongoDB. Experienced in developing scalable features, migrating applications from AngularJS to React, building REST APIs, and improving application performance. Skilled at collaborating in Agile teams to deliver high-quality software solutions.

Skills

Languages: JavaScript, TypeScript

Frontend: React.js, Redux, Zustand, AngularJS

Backend: Node.js, Express.js, REST APIs, BullMQ

Databases: MongoDB, SQL

Cloud & DevOps: AWS, Docker, Git

Practices: Agile/Scrum, Code Review, Unit Testing, Performance Optimization

Work Experience

Octoze Technologies (CAMU), Chennai

Mar 2023 – Present

Software Developer

- Worked on the migration of a large-scale enterprise application from AngularJS to React.js, improving UI rendering performance.
- Owned the core Academic Planning module, a mission-critical system powering 10+ dependent modules across the platform.
- Designed and built scalable RESTful APIs and reusable UI components across multiple product features.
- Established ESLint linting rules and Git pre-commit hooks, reducing frontend build errors by 90% and improving developer productivity team-wide.
- Modernized 10+ year-old legacy dependencies, resolving critical security vulnerabilities and improving overall code-base maintainability.
- Collaborated cross-functionally with Product, QA, and Design teams in Agile/Scrum sprints to consistently deliver business-critical features on schedule.
- Engineered the end-to-end book ordering module, integrating secure online payment processing, purchase limit validation, and automated order fulfillment workflows.
- Architected a BullMQ-based background job scheduling system on a dedicated server, offloading time-intensive tasks.

LearnSky Technologies, Chennai

Mar 2022 – Jan 2023

Software Developer Trainee

- Built reusable React components and optimized performance.
- Resolved bugs and performance issues debugging.
- Developed company's MERN website with dynamic content using MongoDB and backend APIs.

Education

Dhaanish Ahmed College of Engineering

2015 – 2019

B.E. in Civil Engineering

Projects

Quiet Hours – Mobile Application [GitHub: github.com/khalithmoh-dev/QuietHours](https://github.com/khalithmoh-dev/QuietHours)

- Designed and developed a mobile application that automatically declines calls from tagged contacts during user-defined quiet hours.
- Implemented contact tagging and customizable time-window scheduling for granular call-management control.
- Leveraged AI-assisted development with Claude AI to accelerate the build cycle from design to deployment.

iTracker – Investment Tracker Web Application [GitHub: github.com/khalithmoh-dev/InvestmentTracker](https://github.com/khalithmoh-dev/InvestmentTracker)

- Built a full-stack web application enabling users to track investments, portfolio performance, and profit/loss.
- Delivered insights that help users make informed asset-allocation decisions and improve portfolio diversification.
- Leveraged AI-assisted development with Claude AI to accelerate the build cycle from design to deployment.

Awards and Certificates

Camu Star Award

Jan 2026

Awarded for Outstanding Performance in 2025, recognizing consistent delivery with zero production regressions.

Camu Star Award

Oct 2024

Honored with the Q2 CAMU STAR Award in recognition of continuous growth and consistent improvement.
